R2 frequency selection: dimension and source-resampling description
Selected original frequency points
Outer fold
92
62
123
123
92
Each fold selects only from its source data
Outer fold
Original frequency coordinate (THz)
Mean K = 98.4 / 612; descriptive pairwise Jaccard = 0.4338
Number of folds selecting point
Original frequency coordinate (THz)
Overlapping fold-training samples do not form independent batches. Selection frequency is not a chemical-peak assignment.
