

Selected support-only SGD: learning rate 0.001, 10 steps; 1 labelled specimen per class (7 total) for each draw.

Single-batch retrospective evaluation; the same 171 query specimens are reused in 3 seeds × 100 draws (300 non-independent cases).

Class n counts unique fixed-query specimens, not repeated predictions; ZY02 has only one query specimen and remains unrecognized.

Mean accuracy 67.55% remains below the existing classical SVM reference (88.89%). No statistical confidence intervals.
